Gemini pro

Our 'Pro' lighting kits are designed for photographers looking for exceptional value for money without compromising on quality. Kits include two or three Gemini Pro monolights with lighting support stands. To control the light we include a Softbox and a silver/white Umbrella, with wide-angle umbrella reflectors.

The umbrellas are perfect for portraiture and many still-life applications - the black cover can be removed allowing you to fire the light through the umbrella like a softbox.

These kits now include a Pulsar Tx Radio Trigger and a Pulsar Rx Radio Receiver Card to wirelessly sync your camera to your lights. Everything is packed into a rolling case, with a separate bag for your stands for easy transportation.
